## ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a cosmetic excellent in stability and

humectant properties by using a plant extract abundantly containing L-ascorbic

acid by including a fruit extract of  $\underline{\text{CAMU CAMU}}$  (botanical name: Myrciaria dubia).

SOLUTION: This cosmetic is obtained by including a fruit extract of  ${\bf CAMU}$ 

<u>CAMU</u> which is a fruit tree of the genus Myrciaria. A juice prepared by

carrying out a pressing treatment of the juice from the fruit, a liquid part

separated from a pulverized material, a ground material or a crushed material

of the fruit by filtration or decantation, an extract of the fruit (the

pulverized, ground or crushed material) with water and/or an organic solvent, a

precise filtrate by ultrafiltation or the like, a treated-material (a concentated or a diluted material) and the like are cited as the fruit extract

of the <u>CAMU CAMU</u>. The resultant juice, liquid part, extract, precise filtrate,

treated material and the like, as necessary, can suitably be combined. When

carrying out the ultrafltration treatment, a polymeric component having
